ABSTRACT:

PROBLEM TO BE SOLVED: To obtain a pack cosmetic highly adhesive to the skin, standing adhesive to the skin irrespective of skin motion, and also capable of feeding the skin with moderated moisture for a long period of time because of its high moisture-holding ability by including water and a specific carboxylic acid amide.

SOLUTION: This pack cosmetic is obtained by at least including (A) water and (B) a poly(N-vinylcarboxylic acid amide), wherein the component B to be used may be of crosslinked or non-crosslinked type, being esp. poly(N-vinylformamide), poly(N-methyl-N-vinylformamide), or the like, its amount to be used being about 0.3-10 wt.% based on this cosmetic as a whole; and polyvinyl alcohol, polyacrylic acid ester emulsion, or the like, is used as an auxiliary material for coating film formation, and furthermore, as necessary, a water-miscible organic solvent such as ethanol, a moisturizer such as urea, a dispersant may be used.
